

CO₂ caused "Global Warming" is nothing but "dezinformatsiya" from the "settled science" and corrupt Climate Hysterical Complex, and here is why:

PV = nRT (Ideal Gas Law)

How can 4 ‰ CO₂ instead of 3 ‰ CO₂ change T?

Answer: $(44 \div 32) \times E-04$

This is 0.00014 °C due to density change, if all increase of CO₂ is human caused.

In reality, it is ~10% of the increase (Ed Berry & ¹⁴C). See "Climate Miracle" by Ed Berry. The rest is from natural sources, primarily the Oceans. Also see this link.

CO₂ has higher heat capacity ($8.7 \div 7.0$) than O₂, and this reduces the increase that is due to density change ($1.37\uparrow$ vs $1.24\downarrow$ or 0.13). Result: 0.000014 °C, and only 0.0000014 °C due to human activities. Balloon data (measured) (Dr. Connolly & Dr. Connolly) has proven that the Ideal Gas Law is valid, and that the atmosphere is in thermodynamic equilibrium.

There is no "greenhouse effect" by gases. Fine water droplets can absorb IR radiation and slow down radiation to space. Hot, hazy nights provides examples of this effect. Deserts are arid, and temperatures drop rapidly at night, sometimes to below freezing temperature.

Energy transfer is always from warmer to colder. This means that "back radiation" by CO₂ cannot heat the lower atmosphere. This is stipulated by The Second Law of Thermodynamics.

Temperature variations are cyclical as proven by mathematical analysis of temperature data (Dr. Carl-Otto Weiss & Dr. Lüdecke).

The near surface average temperatures (within 1 °C) of planets with gaseous atmospheres is determined by pressure and distance to the Sun. Atmospheric composition does not matter. This is proven by data from NASA space probes. See Zeller-Nikolov and Robert Ian Holmes., PhDs.

It is known that CO₂ absorbs IR energy radiated from the Earth, and that all (The Infrared Handbook, Chapter 5) available energy (~8%) is absorbed at the 15 μm band, and the energy is instantly re-radiated at a continuum of wavelengths. The energy flows from warmer (near surface) to colder (space).

Then there is the effect of clouds as proven by Svensmark. Incoming and outgoing IR radiation is greatly affected by clouds (water droplets). Even modellers are now admitting that they have been wrong, and that clouds have a major climate impact. See Wall Street Journal. Actual measured (reality) data trumps anthropogenic models.

ALL the hysterical climate predictions have failed to come true, yet ridiculous new ones are invented, and spread by the scientifically illiterate media and their "journalists". Taxpayer funded (bought) media are the worst offenders for infecting people with virulent "Climate Rectosis".

The MSM is the messenger of "dezinformatsiya", and the media cannot be trusted for any information.

"We know they are lying.
They know they are lying,

They know that we know they are lying.
We know that they know that we know they are lying.
And still they continue to lie."

-Alexander Solzhenitsyn

NASA motto used to be: In God we trust, everyone else must bring data. NASA is now corrupted and specializes in creating a warming trend from any measured temperature data.

UGLY TRUTH: To heat my home a cold season (7 months) requires 2,200 m³ Natural Gas when temperature is kept at 20 °C daytime and at 16 °C night time. This is 21 MW·h, or \$6,000 and going up if electricity. NG costs \$800 for the season. Cost of electricity at this time would be >\$30,000 in Scandinavia and Germany. Wind and solar are not affordable or reliable. Add costs of a new grid and electric heating systems if everyone switches to "renewable" energy. This will be an economic disaster with energy poverty for most. CO₂ is not changing any "climate".
